Subject: Illinois River Watershed and Lake Tenkiller

Hi Bill,

We just had a IRW Technical Workgroup conference call with representation from ADEQ, ODEQ, OWRB, OCC and the Cherokee nation to discuss the latest output from the Lake Tenkiller EFDC model. The general consensus from the Oklahoma agencies is that the model looks well calibrated for temperature, dissolved oxygen and anoxic volume. Arkansas did not weigh in except to say that the model is greatly improved from last year. Based on these responses, we'd like to have short briefing to discuss the strategy moving forward.

Thanks so much.
Taim.
